有向圖譜半徑之簡易估算方法

研究生:陳科翰 指導教授:翁志文教授

國立交通大學 應用數學系

摘要

找到一個簡單而且傑出的方法來估算譜半徑,試著縮小誤差,必定存在一個方法理性地證明它。我知道譜半徑是區分圖中點連線關係的重要指標,所以找一個簡單的方法來估算譜半徑是很有意義的。有了穩固的證明,我們可以估計連接矩陣的最小誤差譜半徑,並且找出存在這樣的上下界的充分條件。

關鍵詞:譜半徑,簡易方法,有向圖,估算。

A simple method on estimating spectral radius for some direted graphs

Abstract

Find a simple and excellent executable method to estimate spectral radius, try to minimize the bios and there is a way to prove it sensible. I know that spectral radius is an important index to specify the relation of connected vertices in the graphs, so it is meanful to find a simple method to estimate spectral readius. With a solid proof, we can estimate the spectral radius of an adjacent matrix with minimal error

and find out the sufficent condition on the existence of such bound.

Keywords: spectral radius, simple method, directed graphs, estimation
